SIDEWALK VS. SHARED-USE PATH

A sidewalk is a paved pedestrian facility located within or directly adjacent to a street right-of-way and is primarily intended for walking.

A shared-use path (also called a multi-use path) is a wider, physically separated facility designed to accommodate multiple non-motorized users, such as pedestrians, bicyclists, strollers, and runners.

In short: sidewalks are mainly for pedestrians along streets, while shared-use paths are wider facilities intended for both pedestrians and cyclists, often separated from road traffic.
