

PROJECT FACT SHEET

I-270 CROSSING - TULLER ROAD TO EMERALD PARKWAY IMPROVEMENT

Project Description

The City of Dublin proposes to reduce congestion and provide an alternative route along Sawmill Road at and adjacent to the I-270 interchange near Tuller Road and Emerald Parkway. The City of Dublin has determined it is necessary to construct a new crossing over I-270 by connecting Tuller Road and Emerald Parkway. Improvements to the area have the ability to improve mobility for all modes of travel, including personal vehicles, public transit, pedestrians, bicyclists, and micro-mobility. Current information for this project is available at <https://dublinohiousa.gov/construction-updates/> and www.structurepointpublic.com/dublin270crossing.

Improvements to the area have the ability to provide significant congestion relief and improve traffic operations to the Sawmill Road Corridor. The new crossing would also provide an alternative route for traffic on Sawmill Road, Riverside Drive and other adjacent streets, and allow the everyday user to avoid these congested roads. Additionally, a new crossing would increase connectivity and access across I-270 and provide a vital link between the Bridge Street District and the Emerald Parkway corridor.

Bridge Alternative/Location Study

The City of Dublin explored five (5) proposed crossing locations over I-270. Four (4) of the locations started at various points along Emerald Parkway, crossing over I-270 to connect with different areas along Tuller Road to the south within the project area. Another alternative (Alternative 4) began at Bright Road and extended over I-270 to connect with Tuller Road to the south within the project area.

Recommended Alternative

The study identified Alternative 1 as the recommended alternative. Alternative 1 would provide connectivity with the existing street networks and minimize impacts on the existing properties around I-270 and provide an alternative route for pedestrians and bicyclists to cross over I-270. Additionally, Alternative 1 would also maintain the design standards already in place with the Bridge Street District and the Bright Road Special Area.

PROJECT FACT SHEET

Schedule

Using the results of current study efforts, the City of Dublin will present the recommended alternative at the upcoming public meeting. Additionally, the information at the public meeting will also be available in a virtual format and can be viewed at your leisure. Detailed design, environmental studies, and construction phases will follow. No construction date is scheduled currently.

Traffic Impacts

The City of Dublin works to minimize delays and impacts to the surrounding communities, businesses, and residents as much as possible by limiting traffic shifts and utilizing overnight lane closures. Full closure of Emerald Parkway within the project corridor during construction is anticipated. Access to local businesses and residences will be maintained throughout construction. Additional details will be provided in the future.
